Communication and Interaction

Presenting needs may be emerging or fluctuating.

Definition

Children and young people with speech, language and communication needs (SLCN) have difficulty in communicating with others. This may be because they have difficulty saying what they want to, understanding what is being said to them, or they do not understand or use social rules of communication.

Social Communication and Interaction

Children and young people with Social Communication and Interaction difficulties, including Autism, have a difference in the way they process information which affects how they may communicate and interact with people and the outside world.

The Autism Education Trust describes the main three differences learners may experience:

- Social Understanding and Communication
- Sensory Processing and Integration
- Flexible Thinking, Information Processing and Understanding

Attention and Listening

Learners may have difficulties with:

- Maintaining attention to a task
- Switching attention from one task to another

Expressive Language

Learners may:

- Have unclear speech
- Have difficulties making different sounds or using sounds correctly in spoken words
- Have difficulties hearing the difference between speech sounds when
 speaking e.g. three and free
- Stammer or stutter where sounds, words or parts of words are repeated or may be difficult to produce without effort
- Have **differences in voice quality** e.g. persistently harsh, breathy, creaky
- Have differences in intonation so the meaning of what is being said is unclear
- Using sentence structure or grammar expected earlier on in a child's development e.g. 'I falled over'
- Using grammar words such as 'the', 'but', 'so' or 'then'

Expressive Language continued

Learners may:

- Have difficulties sequencing ideas and sentences e.g. stories long winded or not making sense
- Use echolalia (repeating certain words or phrases)
- Have difficulties finding the right words to use at the right time (word finding difficulties)
- Have difficulties expressing emotions, thoughts or feelings

Receptive Language

Learners may have difficulties with:

- Answering questions or giving a relevant answer
- Processing language or need longer to process
- Understanding and following instructions or following what is being said
- Understanding idioms such as 'pull your socks up'
- Literal understanding of what others have said
- Learning and remembering new words or topic/subject specific vocabulary

Interaction

Learners may:

- Have sensory sensitivities/differences
- Have restricted interests
- Present with repetitive behaviours
- Have differences in imaginative thought

Learners may have difficulties:

- Forming positive relationships with peers and/or adults
- Inferring the feelings of others
- Working with others on a shared task
- Understanding non-verbal communication
- Navigating social situations
- Recognising danger and hazards
- With change and transitions

Sensory Processing

Learners may:

- Seek particular sensory experiences
- Avoid particular sensory experiences
- Show signs of distress as a result of sensory input/overload
- Require access to sensory resources to moderate their sensory input
- Show signs of fatigue as a result of sensory processing differences
